MicroMount2 ExtremeRange™ Power Pack

Model #MMER2

Compatible with all 3M Opticom™ and Tomar StrobeCom® Systems*

The most affordable and versatile vehicle-mounted traffic signal preemption device on the market.

Small, lightweight, and watertight, this power pack will drive **nearly any strobe** including (but not limited to) deck and windshield strobes, visor-mounted strobes, PAR-36 and most lightbar strobes, headlamp strobes, grill strobes, etc. Ranges to 2500 feet (NOTE: See our FAQ's for more information about range).

The **ExtremeRange™ Mode** is a standard feature that provides the power for most strobes to capture intersections at 2500 feet or more.

Quickly and easily installs in most lightbars, engine compartments, or any cramped space. Installation time and expense is significantly decreased by eliminating lengthy cable runs between the strobe and power pack.

A detachable mounting plate (included) increases mounting location options. User-selectable disabling features shut down the output when the transmission is placed in park or the emergency brake is engaged.

Authorized Users of the MMER2:

Police; Fire Police; Paramedic and Ambulance Personnel; HazMat Personnel; Traffic Signal Installation, Maintenance & Repair Personnel; State and Federal Law Enforcement Officials; State and Federal Motorcades; Funeral Homes (for processions) etc.
