

Priority Green™

A Division of nth Solutions
Providing Preemption Solutions Since 1990

NanoTube™

NT-2500

Compatible with all 3M Opticom™ and Tomar StrobeCom® Systems*

The *smallest* upgradeable
preemption device
on the market

Integrated Features:
Park / Brake Disable
On-board Diagnostics

Affordable, Dependable, Powerful

When Every Second Counts

The NanoTube™ is the *only* preemption power supply small enough to fit in every known LED and low-profile lightbar. Like all Priority Green™ products, the versatile and waterproof NanoTube™ has been designed to mount anywhere, on any vehicle, and is capable of driving most strobe emitters. The NanoTube's microprocessor monitors timing, power output, device temperature, and other critical factors.

Quickly and easily installs in most lightbars, engine compartments, or any cramped space. Installation time and expense is significantly decreased by eliminating lengthy cable runs between the strobe and power supply. An available installation kit increases mounting location options. User-selectable disabling features shut down the output when the transmission is placed in park or the emergency brake is engaged.

Authorized Users of the NanoTube™

Restricted Sale Product. Preemption devices may only be sold to authorized users and distributors.

Specifications

- Power Supply Requirements: 9.0 to 18 VDC 1.2 amps nominal; mounts directly to positive or negative grounded vehicles
- Selectable transmission/brake disabling feature
- Flash Rate: 14.035 Hz +/- 0.0005 Hz; crystal controlled (10 Hz Low Priority flash rate available upon request)

Mechanical Specifications

- 3"(L) x 1 1/4"(W) x 1"(H)
- 4.6 ounces

NanoTube™
